## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-7 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11-17 of U.S. Patent No. 6,714,184. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to apply the image signals "**to the scanning circuit and the signal circuit to drive the pixel elements**", as newly added limitation in the instant application, since the pixel element is driven in accordance with both scanning driving signal and the data signal circuit. Furthermore, it would have been obvious to apply the clock signal "**to control transmission of image signal to the signal circuit to the pixel elements**", as newly added limitation in the instant application, because the signal circuit is applying data signal to the pixel element in a sequential order and the sequential order must be controlled by the clock signal.
